PALANTIR

TRAINING

What We'll Cover

Your guide to navigating and using the Palantir platform

01

Platform Overview

Data layer, Object layer, and core concepts

02

The Sidebar

Your primary navigation companion

03

AIP Assist

LLM-powered platform assistant

04

Home & Search

Home page and Quicksearch navigation

05

Notifications

Platform notices, alerts, and access requests

06

Favorites & Projects

Quick access to apps, resources, and objects

07

Applications Portal

Discovering and accessing platform apps

08

Account & Support

Profile, settings, and help resources

Platform Overview

Designed to help you use data to solve real-world problems

All Types of Organizations

Early-stage startups · Multinational companies · Governments worldwide

All Types of Users

IT admins · Software engineers · Data scientists · Nurses · Technicians · Operators

Data in the platform lives in two places:

Data Layer

Datasets (tabular data), data lineage tracking, input/output tracing, logic preservation

Object Layer (Ontology)

Objects + Links + Actions = Ontology — a digital representation of your organization

The Data Layer

Datasets, lineage, applications, and resources

Datasets

Store tabular data — like spreadsheets, but at any scale. Sourced from organizational systems or uploaded directly.

Data Lineage

Every dataset records how it was produced. Always know where data came from and how it flows through the system.

Logic Tracking

Palantir tracks input→output datasets and the logic applied. Filtering, transformations, and code are all preserved and visible.

Applications

Interact with data using Palantir's many apps. Anything you produce — datasets, code, analysis — is stored as a resource.

Projects & Resources

Resources are organized into Projects — permission boundaries for grouping and organizing related work. Control who can access what.

Logic ranges from code repositories to point-and-click tools — supporting all skill levels

The Object Layer (Ontology)

A digital representation of your organization

Objects

Represent real-world concepts — an airplane, a vehicle, a customer. They make raw data understandable for everyone in the org.

Links

Represent relationships between objects. E.g., a customer linked to their orders, linked to their delivery address.

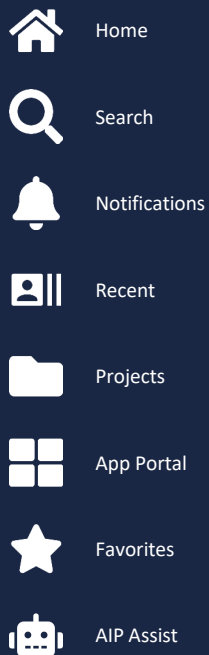

Actions

Define how objects can be changed by people. Enables applications that capture user decisions back into the system.

Objects + Links + Actions = The Ontology — enabling data-driven operational applications

The Sidebar

Your constant companion and starting point for platform navigation

① Primary Navigation

- Home — return to landing page
- Search (Quicksearch) — $\text{⌘}+J$ / Ctrl+J
- Notifications — platform & app alerts

② Quick Access

- Recent — last 20 opened resources
- Projects & files — folder structure
- Applications Portal — all platform apps

③ ④ Favorites & Language

- Favorites — pinned apps, resources, objects
- Language — change interface language

⑤ Help & Account

- AIP Assist — $\text{⌘}+U$ / Ctrl+U
- Support — docs & training resources
- Account — profile, permissions, User ID

Toggle sidebar: **Cmd+O (macOS) or Ctrl+O (Windows)**

AIP Assist

Your LLM-powered platform assistant

Multi-Language Support

AIP Assist can answer questions about the platform in multiple languages.

Context-Aware

Detects which application you are currently working in to give relevant, targeted help.

Platform Guidance

Provides guidance on how to use the platform, including step-by-step tutorials for common tasks.

Data Privacy

AIP Assist does NOT have access to any of the data you are working with — only platform context.

Access AIP Assist: Cmd+U (macOS) · Ctrl+U (Windows) · or from lower-right corner of sidebar

Home & Search

Your starting point and discovery tool in the platform

Home

- **Default Home Page**
New enrollments include a default landing page to help users orient themselves.
- **Custom Landing Pages**
Admins/builders can create custom pages for different user groups.
- **Navigation Focus**
Most home pages focus on navigation, with shortcuts to common workflows.
- **Announcements & Links**
Find platform announcements, workflow starting points, and custom documentation.

Search (Quicksearch)

1. Jump-to Mode

Provides a short list of personalized results to directly navigate to: platform apps, custom apps, objects, datasets, and other resources.

2. Full Results Mode

Advanced filters, rich metadata, and a ranking algorithm. Search apps, objects, datasets, and files. Designed for discovery of content in the platform.

Open Quicksearch: +J (macOS) · Ctrl+J (Windows) · or select Search... in the sidebar

Notifications

Stay informed across the platform — from build completions to access requests

Centralized Panel

Collects notices from across the platform, ordered newest to oldest. Includes direct links to relevant resources.

Grouped by Type

Under 'See all', notifications are grouped by type for easier navigation and management.

Inline Responses

Some notifications like access requests can be approved or declined directly in the panel — no page navigation needed.

Visual Indicators

Unread notifications show a yellow badge on the bell icon. Live pop-ups appear in lower-left corner when you're in the platform.

Dual Delivery

Notifications are delivered both within the platform Notifications panel AND by email by default.

Granular Settings

Settings give you control over global and per-notification-type delivery preferences.

Favorites, Recent & Projects

Quick access tools for your most-used resources

Recent

- Lists last 20 opened or interacted resources
- Quick navigation without using Search
- Works alongside Favorites for fast switching

Favorites

- Favorited Apps — pin any app to sidebar
- Favorited Resources — star icon in folder/resource
- Favorited Objects — star in Object Explorer view
- Ctrl+Click / Cmd+Click to open in new tab

Projects & Files

- Links to Project folder structure
- Access: Data Catalog, Your files
- 'Shared with you' shortcut

Promoted Apps: star any app in Applications Portal → it appears in a dedicated sidebar section for quick access

Applications Portal

Find and access all platform and promoted applications in one place

Analyze Data

- Code Workbook
- Code Workspaces
- Contour
- Fusion
- Preparation
- Quiver
- Reports

Build & Monitor Pipelines

- Code Repositories
- Data Lineage
- Data Prep
- Catalog
- Projects

Operational Applications

- Object Explorer
- Workshop
- Forms
- Slate
- Fusion

Both Platform Apps (built-in) and Promoted Apps (custom, approved) are discoverable in Applications Portal

Account & Support

Profile settings, permissions, and getting help

Account Overview

- View recent contributions and popular resources you've created
- Edit Profile → access User Settings
- Set profile image and additional info for colleagues

Settings

- Customize profile visible to other users in Projects
- Helps in workflows that involve assigning work
- Account tab: find your User ID and permission Groups

Support

- Customer Success Services: support, training, consultation
- Report issue → create a support ticket in Issues app
- Access Palantir docs and training resources

Notifications Tab

- Control center for notification delivery settings
- Global and per-type delivery preferences
- Manage in-platform vs. email notification settings

Other Workspaces: Access Control Panel (admins) and Carbon Workspaces (custom curated experiences for end users)

Keyboard Shortcuts Quick Reference

Keep these handy to navigate faster

Toggle Sidebar

macOS **Cmd + O**

Windows **Ctrl + O**

Open Quicksearch

macOS **Cmd + J**

Windows **Ctrl + J**

Open AIP Assist

macOS **Cmd + U**

Windows **Ctrl + U**

Open Favorited Resource in New Tab

macOS **Cmd + Click**

Windows **Ctrl + Click**

You're Ready to Explore!

You now understand the core concepts and navigation of Palantir Foundry.

Quick Recap

- ★ Data Layer & Object Layer (Ontology)
- ★ Sidebar — your navigation hub
- ★ AIP Assist — context-aware AI help
- ★ Search, Notifications, Favorites
- ★ Account settings & support resources
